Open to Werkstudent & internship opportunities

PROFESSIONAL SUMMARY

Information Engineering student at HAW Hamburg building production-ready AI systems and data automation pipelines. Hands-on with LLM pipelines, RAG architectures, ERP data agents, and hardware-software integration. Nearly two years of Werkstudent experience in international project coordination and stakeholder management. Proficient in Python, SQL, and Power BI; experienced with embedded systems and REST API development. Trilingual (Hindi, English, German). Portfolio: kushagr2602.github.io/kushagr.github.io

CORE COMPETENCIES

Python & AI Pipelines

LLM & RAG Systems

Data Engineering & ETL

Power BI & Dashboards

SQL & Data Modelling

Embedded Systems

Project Coordination

Multilingual (EN / DE / HI)

EDUCATION

B.Sc. Information Engineering – HAW Hamburg

2023 – Present

Hochschule für Angewandte Wissenschaften Hamburg

B.Tech Computer Science – SRM Institute, Delhi

2021 – 2023

Merit scholarship, first year

UNIVERSITY HIGHLIGHTS

- Coursework: databases, data structures, statistics, software engineering, operating systems — applied directly in personal AI and automation projects.
- Passed all exams on first attempt while working part-time across multiple concurrent projects.
- Member of Hawks Racing (student motorsport team) and OE Tutor.

SKILLS & LANGUAGES

AI & LLM: LangChain, RAG pipelines, OpenAI/Gemini APIs, local inference (llama.cpp, Ollama), LoRA/QLoRA fine-tuning, MCP

Programming & Data: Python (pandas, FastAPI, data pipelines), SQL, Git/GitHub, REST API design, Firebase

Reporting & Tools: Power BI, Excel, ERP workflow mapping, data visualisation, process documentation

Embedded: Arduino, sensor integration, PWM control loops, hardware-software interfacing

Languages: Hindi (native) · English (fluent) · German (B1+, aktiv verbessernd)

COMMUNITY & VOLUNTEERING

OE Tutor – HAW Hamburg

Organised orientation for 200+ international students each semester; managed logistics and coordinated follow-up across a multilingual group.

Heimrat – Allermöhe Student Dorm

Elected student representative; represented 200+ residents in institutional meetings with Studierendenwerk Hamburg.

Hawks Racing – HAW Hamburg

Member of student motorsport engineering team; vehicle development under real performance and deadline constraints.

EXPERIENCE

Coracle GmbH (Lumeira Group)

05/2024 – 02/2026 · Hamburg

Werkstudent International Marketing

- Managed content and partner projects end-to-end with full ownership across planning, execution, documentation, and follow-up in a fast-paced international environment.
- Delivered status updates and reports to senior stakeholders; tracked deliverables across concurrent workstreams.
- Handled stakeholder communication in three languages across an international partner network.

ABC Infosoft Pvt. Ltd.

06/2021 – 09/2021 · India

ERP & Mobile App Intern

- Mapped ERP user journeys across modules, identified bottlenecks, and documented structured findings for the development team.
- Contributed mobile app feature ideas; completed training project independently to PM specification.

Argus Polymers Pvt. Ltd.

07/2022 – 08/2022 · India

Industrial Intern

- Observed automated plastic moulding and injection moulding processes; built understanding of maintenance practices and engineering plastics (Nylon, ABS).

PROJECTS

Local LLM Research & AI Inference Server

AI

Hardware-Software

Converted a repurposed PC into a local AI inference server running quantized LLMs (LLaMA, Mistral) via llama.cpp and Ollama on CPU-only hardware. Benchmarked inference speed and memory across quantization levels; exposed a REST API endpoint. Fine-tuned Phi-3 and TinyLLaMA with LoRA/QLoRA on custom datasets.

Python · llama.cpp · Ollama · LoRA/QLoRA · REST API · Linux

AI-Powered ERP Data Analyst Agent

AI Agent

ETL

Agent routing natural-language business queries through a RAG pipeline into SQL, returning structured insights from a live ERP database. Includes a validation layer (dry-run + plausibility checks) to prevent unsafe queries reaching production data.

Python · LangChain · RAG · SQL · FastAPI · OpenAI API

Adaptive Grow-Light Controller

Embedded Systems

Arduino Nano embedded system combining an LDR ambient-light sensor with a PWM firmware control loop. Reads sensor input in real time and adjusts LED output to maintain a target light level through closed-loop feedback.

Arduino · C++ · PWM · LDR sensor · Embedded firmware
