

KUSHAGR GUPTA

Information Engineering Student | AI & Agentic Systems

kushagr.kg@gmail.com • (+49) 17634625810 • Hamburg, Germany (flexible & ready to relocate)
github.com/kushagr2602 • [Portfolio](#)

PROFILE

Information Engineering student at HAW Hamburg building and shipping AI agents end to end: RAG pipelines, LLM-driven generation, and structured tool orchestration exposed through real interfaces, including MCP servers. Ships a working prototype fast and iterates on real usage rather than polishing in isolation. Comfortable with Python, SQL, and automated pipelines, and with running training and communication at scale. Trilingual (Hindi, English, German).

EDUCATION

Hochschule fur Angewandte Wissenschaften Hamburg (HAW Hamburg) <i>B.Sc. Information Engineering (final year)</i>	2023 - Present
SRM Institute of Science & Technology, Delhi <i>B.Tech Computer Science</i>	2021 - 2023
• Achieved Merit scholarship in the first year.	

SKILLS

AI & LLM: LLM agent design, RAG pipelines, tool orchestration, MCP (Model Context Protocol), prompt engineering, LangChain, Claude, Gemini/OpenAI APIs
Programming & Data: Python, SQL & data modelling, Git, GitHub Actions CI/CD, FastAPI, ERP & CRM data workflows
Professional: Stakeholder communication, training and workshop delivery, cross-functional teamwork, Microsoft Office

EXPERIENCE

HAW Hamburg <i>OE Tutor</i>	Ongoing Hamburg
• Supported week-long orientation for 200+ international students each semester, designing and delivering structured onboarding sessions independently.	
Coracle GmbH (Lumeira Group) <i>Werkstudent International Marketing</i>	05/2024 - 02/2026 Hamburg
• Owned content projects end-to-end, coordinating stakeholder communication across an international network in a fast-paced environment.	
• Handled incoming customer enquiries across multiple channels with timely, service-oriented responses.	
ABC Infosoft Pvt. Ltd. <i>ERP & Mobile App Intern</i>	06/2021 - 09/2021 India
• Mapped ERP workflows and user journeys, identifying and documenting bottlenecks between modules in real usage.	

PROJECTS

AI-Powered ERP Data Analyst Agent (Python, LangChain, RAG, SQL, MCP)	
• Built a RAG pipeline over ERP documentation and schema with LLM-driven SQL generation, and exposed the tool layer via an MCP server.	
• Handled tool selection, context retrieval, and error handling, with a guardrails layer to catch bad queries before they reach production data.	
Polymarket Signal Analyser (Python, OpenAI API, MCP, Streamlit, Supabase/Postgres, GitHub Actions)	
• Built a pipeline (Streamlit Cloud, Supabase Postgres, scheduled GitHub Actions ingestion) that scores ~1,000 prediction markets hourly, with a public demo and open-source repo.	
• Added a 14-case labeled eval harness as a regression gate for prompt changes.	
Local LLM Research & Inference Optimization (llama.cpp, Ollama, LoRA/QLoRA)	
• Ran quantized LLMs locally via llama.cpp and Ollama, benchmarking inference speed and memory usage across quantization levels; fine-tuned Phi-3 and TinyLLaMA using LoRA/QLoRA on custom datasets.	

LANGUAGES

Hindi Native	English Fluent	German B1, actively improving
------------------------	--------------------------	---
